

Series C58-1- C58-DD

LABORATORY CENTRIFUGE

The belt driven or direct drive series C58 or C58-DD centrifuge is a medium to high accuracy laboratory centrifuge designed for the dynamic test and calibration of precision accelerometers and small electromechanical devices.

Both series make use of AC brushless motor technology that allows for long life maintenance free operation.

The direct drive technology combined with the new generation of all digital **AXIDYN LT** control system delivers large servo bandwidth and high dynamic response. It also does minimize maintenance cost. Several models and options are available:

- Customized electrical slip-rings
- Optical fiber rotary joint and modems
- Fluid rotary joints

The new generation of control system **AXIDYN LT** includes the following operating modes: DC linear acceleration and sinusoidal g profiles.

Optional remote interfaces available are:

- Ethernet
- IEEE 488
- USB port
- RS232 / RS422
- I/O analog input/output

Based upon its 30 years of experience, **ACTIDYN SYSTEMES** team of engineers has designed a family of high performance simulators, which combines quality and high performances at low cost that are conceived to satisfy customers needs.
